Gentlemen:

I need a 8 x 10 enlargement of each side of the following
two coins.

E-0219-D - \$20 1853 U. S. Assay Office

E-1323-D - \$20 1853 U. S. Assay Office.

This is very important. Thanks.

Best greetings for the Season.

Sincerely,

Eric P. Newman

Gentlemen:

Registered #234628
\$4000 = 610
past. 1225 87.73

E-1323-D is a United States Assay office \$20 1853. Weight 31.604 grams. This piece has definitely been polished and ground. I have never before seen a die break extending from the edge, to the second S of STATES, to the S of the ribbon containing 900 THOUS. This die break must have been near the end of the life of the obverse die if it is a genuine die break. Otherwise it could be at the end of the life of a false die. If it is genuine the common reverse die break down from SS through the letters on the right side of the panel has been ground away. If it is false this was ground away on the false hub or die. It is very clear that the raised lump to the right of the upright of the T of UNITED has been ground away on this coin as this lump is clear in every genuine coin from this die. The grinding is obvious as the coin shows working in that area. Above the second T in TWENTY is a depression which looks artificial and is not an accident to the coin. The edge has the proper amount of reeds which false pieces I have seen do not. The troughs between the edge ridges do not extend completely to each end as they usually do. If you examine the edge on the other piece you will note the difference. Yet genuine ones sometimes have this same insufficiency of trough length. The surface of the coin has been jet honed or otherwise whizzed. The most devastating evidence is that certain false coins of this variety also are missing the reverse die breaks. The polishing job is superb. Our opinion is that it has been deliberately altered to such an extent that we cannot tell whether it is genuine or false. It shows very little wear and, since the original dies, false hubs and transfer dies have been extant in modern times, it is perfectly possible that this coin could have been made from them.

There seems to be little basis as to ask the source of this coin as it must have changed hands many times.

Our opinion is that we are not positive whether this is genuine or false, but we do know it has been extensively tampered with.

Sincerely,

Eric P. Newman

jah

Encl.

- * The other coin referred to is E-0219-D.
** Where the obverse perimeter and the edge meet on ~~this~~ coin there has been a diagonal beveling produced by buffing or polishing all around the perimeter of this coin as part of its alteration.

ANACS

818 North Cascade

Colorado Springs, CO 80903

Gentlemen:

E-3059-D - This 1722 Rosa Americana 2 Pence shows copper plating is flaking off opposite the 2 on the edge and white casting metal is exposed. A similar exposure is above the stop after the date and another above the SA of ROSA. All of the pitting on the coin is cast rather than an accident to the coin itself. The specific gravity is too low at 7.85, although these pieces vary. The color should be more brassy. The piece is false.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Eric P. Newman', with a long horizontal flourish extending to the right.

Colorado Springs, CO 80903

Gentlemen:

E-8829-C is a small Pine Tree Shilling with very heavy die breaks. Weight 4.58 grams, sp. gr. 10.29. The coin is Noe 16. The die break from the rosette through the tree, through the inner circle and into the I of IN is broad and heavy, being the maximum break we have ever encountered. The break is much more extensive than Lot No. 7 in the Stack sale of December 7, 1979. This coin has some very bad characteristics and may be a cast, but we cannot prove it. Its edge has been definitely worked and smoothed. There is concaving in the edge opposite M and this might have been a casting port. The dirt on the surface all seems recently applied as it is soft, loose and gummy. The color of the lumpy field is very uniform and the raised portions have a lighter uniform color, thereby seeming somewhat unnatural. There is a circular trench above NG on the reverse parallel to the circumference and this may have resulted from the edge being tooled and slightly folded over in the course of such tooling.

We sincerely believe that the submitter should be requested to furnish the provenance on this coin as far back as the owner can. The coin was originally valued at \$12,000, showing that the submitter could be inexperienced. I believe in a situation of this nature there is nothing wrong with asking for the cost, the source, the date of acquisition, the right of return, the invoices, if any, etc., from anyone involved in the last few years.

I wish I could give an equivocal opinion based upon the coin itself, as it is unusual to ask such questions as I am.

Let me hear from you.

Sincerely,

Eric P. Newman

Colorado Springs, CO 80903

Gentlemen:

The following coins are returned herewith:

- E-3627-D U.S.A. Bar Cent. 5.241 gms. Sp. gr. 8.86.
This unworn piece has a diameter of 26 mm, whereas genuine pieces have a 25 mm diameter. This has a raised thin band around the circumference on both sides which indicates use of a collar and no collar was used in striking genuine pieces. The crossbar of A is weak and does not rise on its left end. Top of serif on upper end of S is flat instead of pointed. Bottom of serif on lower end of S is horizontal instead of sloping to the left. Left side of serif on lower end of S is vertical instead of sloping gently up to the left. The forked end on the second bar on the reverse is not present. The center bar ends opposite the space between two dentils on one end instead of opposite one dentil on each end. The piece has a depression in the field above the right serif of the left leg of A. In our opinion this is an extremely dangerous forgery which we have not previously seen.
- E-4345-D 1792 Half Disme. 1.230 grams. Silver. Heavily worn, particularly on reverse. Diagonal edge reeding nice. Genuine.
- E-3127-D Fugio Cent 9.937 grams. 8.87 sp. gr. Planchet defects. Substantial wear. This is copper. It is not brass. Genuine although the edge split looks like those on an electrotype.
- E-0219-D \$20 1853 U.S. 900 fine. 33.350 grams. Reverse die break. Very fine plus with some brilliant surface parts. Normal number of edge reeds. Genuine.
- E-1755-D \$50 Humbert 1851. 84.39 grams. 17.62 sp. gr. Heavily worn and and battered. Edge reeding complete and natural. Genuine.

Sincerely,

Eric P. Newman

\$6.23

Gentlemen:

The following coins are returned herewith.

- E-7216-D \$10 Mormon Gold 1849. Sp. gr. 12.94. Wt. 11.170 grams. Casting holes throughout. Letters weak. Buffed and polished heavily. Specific gravity too low. A crude cast forgery.
- E-6562-D 1652 Small Pine Tree Shilling. 9.90 sp. gr. Wt. 4.026 grams. Noe 29. Off center and heavily worn. Genuine.
- E-7065-D 1652 Large Planchet Pine Tree Shilling Noe 10 clipped to steal silver eliminating most of area beyond the inner circles. Weighs only 2.87 grams. Probably clipped during its circulation. Genuine but abused.
- E-7668-D 1652 Small Pine Tree Shilling Noe 20. Wt. 4.573 Sp. gr. 10.198. Genuine.
- E-5201-D 1849 \$5 Mormon. Sp. gr. 17.87. Wt. 7.23 grams. Natural yellow color. Xf. Genuine.
- E-7452-D 1776 Continental Dollar Variety 2-C with CURRENCY. Wt. 16.38 grams. Sp. gr. 7.543. This coin has a nice edge and a typical reflective surface. It has raised blotches in the WE ARE ONE area and around the second A of AMERICAN. The circumference of the outside ring around GEORGIA has dipped in over the R due to metal sticking to the die while hot. Genuine.
- E-7364-D Bar Cent 5.441 grams. 8.67 sp. gr. The specific gravity is low. This coin shows no trace of the leg of A crossing over the S. The right side of the top of the left serif of S touches the U above. Both of these defects could be caused by wear. The reverse die break is present. I see nothing else suspicious. I must therefore call it genuine.

Sincerely,

Eric P. Newman

Dear Mr. Newman:

[REDACTED]

Regarding the Bar Cent - Nr. E-8253-A and E-3627-D, it was the same coin, resubmitted by the owner, possibly to test ANACS again. The coin was never sold to anyone else in the meantime.

It was very nice of you to call it to my attention though, because I would not have known about it, having been at ANACS only six month.

Thank you so much for your help and take care.

Sincerely,

Ingrid

Gentlemen:

E-3766-C - 1766 Pitt farthing. Wt. 3.53 grams. Sp. gr. 7.47168 which are within normal range. This coin has quantities of raised lumps throughout the field inside the border lettering on both sides. The field around and outside the border lettering is much smoother. The A in THANKS is indistinct and other letters are weak principally at the lower portions. The face and hair has lumps. The edge is rough with a small crater next to RI in FRIENDS and with border beading missing opposite the T of STAMPS. This coin is cast. Genuine pieces are on cast planchets causing low specific gravity but are well struck and have smooth fields. The edge of genuine pieces is cut with a circular die. Thus the submitted piece cannot be die struck and is a forgery. It is an old forgery in my opinion.

The coin is enclosed herewith.

Sincerely,

Eric P. Newman

Gentlemen:

- E-0191-G - Pine Tree Shilling Noe 27. Wt. 4.53 grams. Sp. gr. 10.197. The obverse has an unnatural granular area around the ornament and under the lower right tree limb. The reverse has a strong central area and very weak letters in the border. To the left of the left diagonal arm of the A are peculiar depressions, one across that arm. The field from 7 to 10 o'clock is very mottled as are other areas. The edge is too smooth, too uniform and too beveled to be natural. I am not certain, but I feel this is a cast coin, thus a forgery.
- E-9879-E - Pine Tree 6d Noe 33. 1.56 grams. 9.93 sp. gr. This coin is complete and should weigh about 2.20 grams. Its specific gravity should be 10.3. These deficiencies condemn the coin. The apparent die break over the right side of the roots is not known. This lump appears polished as does part of the field. Forgery.
- E-1269-G - Pine Tree 6d Noe 33. Wt. 2.26 grams. Sp. gr. not measured. This coin has been either artificially colored or it has been cleaned crudely in parts. There is a cleaned border around the obverse. The lower half of the area in the inner circle is cleaned. The reverse has a black field around 165. The edge is very smooth. The obverse field is generally very black and the reverse field mostly natural light tarnish. This difference is strange, but can come from exposure. I do not find anything wrong with it other than abuse in modern times. I must, therefore, say it is genuine but mistreated.

The coins are returned herewith.

Very truly yours,

Eric P. Newman

jah

Encls.

P.S. I am worried that two Pine Tree 6d of the same variety were submitted at the same time. I have not been sent one in many years for authentication. This gives rise to further suspicions.
